

# Steam Generator for Conveyor Cleaning

KHD Technology's industrial steam generators deliver powerful, eco-friendly cleaning solutions designed to meet the demanding hygiene standards of the food, beverage, and packaging industries. Engineered for conveyor belt cleaning systems, these chemical-free steam cleaners provide deep and effective sanitation while minimizing water and energy use. The range includes steam cleaners for conveyor belts, automated conveyor cleaners, and heavy-duty conveyor belt cleaning equipment all built for maximum efficiency and reliability. KHD's conveyor belt sanitation systems and industrial cleaning solutions help manufacturers maintain consistent production hygiene, extend equipment life, and support sustainable operations.

Established in 1998 in the UK, KHD Technology (Keith Handy Design Ltd) brings over 25 years of expertise delivering high-performance industrial steam cleaner systems designed specifically for the food production environment. Our core solutions—conveyor belt cleaning systems, steam cleaners for conveyor belts, and automated conveyor cleaning machines—enable chemical-free, eco-friendly hygiene across food manufacturing, beverage, packaging and related sectors. KHD's portfolio includes heavy-duty conveyor belt cleaning

equipment, conveyor belt sanitation systems, industrial cleaning solutions, and conveyor maintenance tools built to integrate seamlessly with food-grade conveyor operations. Our advanced industrial conveyor belt maintenance devices and conveyor belt cleaning machines support food-industry hygiene requirements, sustainability goals and operational efficiency by minimizing water, energy and chemical use.
